Create and manage multiple SQLite databases and manipulate all the fields that have the same name. SQLite Expert Personal is a practical and reliable tool that will save you a lot of time when you need to perform some complex operations with your databases. It allows you to easily manage SQLite databases and gain significantly better visibility into how your tables and classes are operating. Additionally, the application will come in handy when you have to create, manage, alter or delete complex SQL scripts or simply build complex queries using Query Builder. The main window of SQLite Expert

Personal displays all the connected databases and allows you to execute your own SQL scripts using the Query Builder option. You are able to easily restructure fields, foreign keys, indexes, constraints and triggers without losing any data. Simply point the application to the Data tab and quickly perform any action you want. When you launch the application for the first time, it will create a default alias for the database you have selected, but you can change it according to your preferences. Then, you can easily open an existing database or create a new one by navigating to the File menu. After choosing the database you are interested in, you are able to view all the tables in the left tree panel and edit them by running complex SQL scripts such as Delete, Update, Insert, Create or Alter Table. You can then save your work, cancel a query or start another one using the Application Menu. Additionally, you can reindex all the tables, release a savepoint or commit a transaction in the selected database using the Transaction menu.

With the help of SQLite Expert Personal you can:

- *Edit fields, foreign keys, indexes, constraints and triggers in tables that you create, alter or delete;
- *Create new tables, add columns, foreign keys, indexes, constraints and triggers;
- *Create, update and delete new or existing tables;
- *Execute SQL scripts using the Query Builder option;
- *Execute queries using the File menu or by pressing the Search button;
- *Edit queries, using the Structure or Parameter tab;
- *Display information about a table or a column using the Databases grid;
- *Navigate between tables, fields and columns and find information about a table by using the left tree panel;
- *Delete, insert, update, create, alter or rename a table, column or table column;
- *Sort tables by using the Sort tables by ascending/descending option;
- *View the total number of indexes, triggers, tables and views
