

Zork (or Zork Zero) is a text-based game designed to teach computer programming. It was conceived by Ken Bain. Zork was written to be a demonstration of interactive fiction, which should the user read this text while on the computer. Unlike most text-based games, Zork has a graphical aspect, consisting of several screens that can be manipulated by the player using the mouse. The game allows the user to interact with the environment and other characters, often through questioning and choices of textual responses, such as asking for information or words. Zork, first released in 1981, can be played in a number of different ways. A novice player may have a hard time trying to figure out how to proceed, and a seasoned player may not always be in a mood to play. Zork III was released in 1987 as a more stand-alone game. Zork was and still is one of the most commercially successful games ever. The original Zork program, of which the Zork series is based, is now considered among the best computer games of all time and has been used in numerous educational and research settings.
