Dr. Ostrowski, a Boston native and gerontologist, and Dr. Frank, a former Philadelphia face-lift recipient and facial expert, will share practical advice on managing aging skin. This 11:30 a.m. appointment is for people age 50 and older and lasts about 20 minutes. To attend, please register by calling the parish office at (623) 288-2058. TESTIMONIALS "I want to thank you for giving me the opportunity to share my concerns with you, all of your advice, your prayers and your care. May we serve and serve each other as Jesus taught, as The Gospel teaches and as we live. Thank you Father for your blessings." - Carol K, January 14, 2018 "Thank you for all of your prayers for our family. We know you don't have control over all things, but still know we are in good hands. We are so grateful to God for giving us You, Jesus." - Laura and Dave F, January 14, 2018 Lyme borreliosis in orthopedic surgery: are there risks from multiple injections of local anesthetics in contaminated sites? There is only limited evidence regarding the relationship between multiple injections of local anesthetics and the development of the Lyme borreliosis. We conducted a case-control study using data from a local database to investigate the association between frequent injections of local anesthetics and the development of Lyme borreliosis in patients undergoing orthopedic surgery. Patients with and without Lyme borreliosis undergoing orthopedic surgery were identified from a local database. In addition, a random sample of patients undergoing orthopedic surgery was taken from the database. The clinical characteristics were compared between these two groups. Only the injections in the wound, not the pre- and postoperative injections, were considered for the present analysis. Nine patients with Lyme borrel
