Join the campaign and make a difference.Q: What is the difference between $X \times Y$ and $X \times Y$? I have seen this in some textbooks. I do not understand what the difference is. How does one generalize the universal property of cartesian product? A: In general, if X and Y are sets, $X \times Y$ is a set whose elements are ordered pairs of elements of X and Y . So $X \times Y = \{X \times Y\}$. If the set X has several elements, it might be a natural question to ask what $X \times Y$ is. In that case, the universal property that ι has to verify, when given a function $f: X \times Y \rightarrow Z$, is:
