“Designing REZ’s universe has been a unique journey. We started by investigating various spiritual cultures, looking for the source of the core principles and symbols hidden within. We eventually discovered that the original REZ (realm of eternal zen) is a lost ninja village in Japan. Then, although incredibly different, it totally made sense. Being from Finland we love both our culture and anime, and the historical aspect was extremely appealing, as it’s so wonderfully different from the western way of doing things.” — From the game’s website. REZPLZ is a classic game of classic games. In a world where the current life seems to no longer be relevant, a young zen monk named Rez hopes to find a meaning in life through his life and his gift. But the way he sees the world is through a strange and foggy psyche, and when you throw in his friends who will help him on his journey, you get a platformer that’s out to change the way you view the world. Rez comes in two flavors. The first is the nomadic life of a Zen monk, who travels the world in search of new experiences and to help fellow zen monks. This is Rez’s sanity mode. He’s not invincible, but he can stop time, use telekinesis, and will use his alien powers to fight off the demons that are

tearing the world apart. He can also use the powers to solve problems, and in some cases save you when you're about to die. The second mode is called Rezlogic. This is the "Life Mode", which is where you play as the main character Rez. Rez has a special relic, with the power to let him transform himself into seven different aliens. And unlike the Zen monks, he can barely hold on to his sanity in this mode. So what are we trying to do? How do we want you to play REZPLZ? Well, honestly, we want you to express yourself and your individuality. We want to create a game that's unique to you and your friends, a game where you can look up at a puzzle board and have a great time just by choosing the colors you like to play with. We want to create something that makes you smile, something that is in tune with the way you play games. So, in other words, we're hoping to

Terraria is a unique "sandbox RPG" with amazing visuals, but a very old feel and playstyle. This may not be to everyone's taste, but for those looking for a different take on the classic RPG genre, Terraria should certainly be on your radar. It's a free-to-play game, so there's a way to test the game without spending a dime. I had fun playing this game as I've played all of the previous game in the series. It's obvious the game was made by a fan of the original game, because the graphics are absolutely beautiful and a vast improvement over previous games. Gameplay hasn't really changed, but now you can explore a little deeper than before. The side quests are fun, too, but I wish you could explore the ruins out back for ages. There is only one issue: not a lot of enemies to be found, especially after the recent quest update. There are plenty of caves and some geeks, but the only real threat is the night time trolls, who don't attack you unless you're in the light. Other than that, I had fun blowing up floating rocks and getting amazing materials to create a crafty vehicle.

isation des confins maritimes dans l'Habitat de la Méditerranée (débat) Le Président L'ordre du jour appelle le rapport de M. Piecyk, au nom de la commission de la politique régionale, sur la valorisation des confins maritimes dans l'Habitat de la Méditerranée. Paulo Casaca Monsieur le Président, je voudrais tout d'abord féliciter M. Piecyk pour sa question et pour avoir accompli une immense tâche en couvrant les grands aspects de la mer dans la Méditerranée. Je voudrais également remercier tous les autres membres de la commission de la pêche pour leur travail. Je serai assez bref en tant que rapporteur de la commission de la pêche pour le rapport. Je voudrais souligner trois aspects importants concernant les pêcheries ex nihilo se trouvant à de grandes profondeurs dans les eaux qui montent de la côte marocaine et dont les troncs ne sont pas engendrés par l'inondation à proximité. Il s'agit de la région de la pêche à maître d'angoisse, conformément aux conditions de la réglementation internationale - à savoir pour la mer du Nord, la région de la Mer du sud et de l'Atlantique Nord. Les deux premiers appellent également l'observation et l'étude des stocks de cabillaud qui se dessinent pour l'observation et les diverses mesures à prendre à l'égard des équations des stocks et de la réglementation internationale qu'il s'agit d'appliquer dans la plus grande bienveillance, et je pense qu'il convient de

faire preuve du même respect mutuel. Les sept derniers États membres de l'Union européenne, y compris le Portugal, sont concernés par le développ

1. Field of the Invention The present invention relates to a refrigerator door and a hinge mechanism therefor, and more particularly, to a refrigerator door for a refrigerator having a slim structure and a hinge mechanism for the same capable of improving corrosion resistance of the hinge mechanism. **2. Prior Art** Typically, a refrigerator includes a case for receiving food to be preserved and a door movably mounted to the case. The door is made open/close by a hinge mechanism mounted in the door and case. Recently, as a trend for global environmental protection has become more rigid, the manufacture of refrigerators has developed toward slimness thereof. In order to obtain a slim refrigerator, the hinge mechanism for the door must also be slim. For this purpose, in addition to improving the hinge mechanism itself, such as reduction of the weight of the hinge mechanism, improvement of a corrosion-resistant property thereof, and improvements in other quality factors. One prior art hinge mechanism is disclosed in U.S. Pat. No. 5,555,819. The hinge mechanism includes first and second shafts which are movably connected to each other, first and second hinge members mounted at both ends of the first and second shafts to be rotatable in

longitudinal and transverse directions, a first kinematic coupling pivotably mounted on one of the first and second hinge members, and a second kinematic coupling pivotably mounted on the other one thereof. The first and second kinematic couplings are slidably connected to each other so as to allow angular rotation of the first and second shafts as well as longitudinal and transverse rotation of the first and second hinge members. Another prior art hinge mechanism for a refrigerator door is disclosed in U.S. Pat. No. 6,478,076. The hinge mechanism includes a shaft, a hinge member having a hub rotatably mounted to an end of the shaft, and a first connection member and a second connection member. The first connection member and the second connection member are mounted to the hub of the hinge member so as to be slidably and spaced apart from each other. The first connection member is connected at one side of the shaft while the second connection member is connected at the other side of the shaft, so that the first connection member and the second connection member are freely slidably connected to the shaft with the hinge member
